

Product Information Sheet

Innovar Wireline Fishing Magnets are wireline or (coil/DP/tubing) pipe deployed tools recommended for most post milling, fishing or general metal debris extraction.

Wellsweep fishing magnets utilise the patented wellsweep concept where two magnet elements work in tandem with opposing magnet polarisation. This provides a stronger magnetic field than traditional flat mounted magnets, making the tools more effective.

The Wellsweep pulls the debris down into the space between the magnets locking it in place for easier retrieval from the well.

Innovar Magnum magnets are equipped with a mangan magnet specifically designed for Innovar for use in fishing magnets. These magnets produce a very powerful magnetic force that, due to specific precautions taken in the manufacture is retained at temperatures of up to 120 deg^C.
